

Amendments To The Claims:

This listing of claims will replace the previously filed claims in the application:

1. (Currently Amended) A lacrosse stick comprising:
a lacrosse stick handle; and
a lacrosse an articulated head connected to the lacrosse stick handle; and
an articulation mechanism disposed between the lacrosse stick handle and
the lacrosse stick head.
2. (Currently Amended) The lacrosse stick of claim 1, wherein the
articulated lacrosse head is connected to the lacrosse stick handle by an the articulation
mechanism.
3. (Currently Amended) The lacrosse stick of claim 21, wherein the
articulation mechanism is located between an end of the lacrosse stick handle and a base of the
lacrosse head.
4. (Withdrawn) The lacrosse stick of claim 2, wherein the handle comprises
a first handle portion and a second handle portion and the articulation mechanism connects the
first handle portion and the second handle portion.
5. (Currently Amended) The lacrosse stick of claim 1, wherein the
articulation mechanism is contained within the lacrosse head and lacrosse stick handle.
6. (Currently Amended) The lacrosse stick of claim 1, wherein the lacrosse
head is moveable from a longitudinal axis of the lacrosse stick handle to a displacement angle of
up to about 60 degrees.

7. (Original) The lacrosse stick of claim 6, wherein the displacement angle is from about 1 degree to about 10 degrees.

8. (Original) The lacrosse stick of claim 6, wherein the displacement angle is from about 2 degrees to about 5 degrees.

9. (Currently Amended) The lacrosse stick of claim 1, wherein the lacrosse head is moveable from a longitudinal axis of the lacrosse stick handle to first and second displacement angles of up to about 60 degrees each.

10. (Original) The lacrosse stick of claim 9, wherein the first displacement angle and the second displacement angles are oriented in opposite directions from each other.

11. (Original) The lacrosse stick of claim 10, wherein the first and second displacement angles are the same.

12. (Original) The lacrosse stick of claim 10, wherein the first and second displacement angles are different.

13. (Currently Amended) The lacrosse stick of claim 1, wherein the lacrosse head is articulated in a direction in which a lacrosse ball would exist exit the lacrosse head.

14. (Currently Amended) The lacrosse stick of claim 21, wherein the articulation mechanism comprises:

a first element having an extended portion; and

a second element having an interior that is sized to allow the first element to at least partially engage the interior and move from a first position to a second position within the interior.

15. (Original) The lacrosse stick of claim 14, wherein the first element and the second element are connected by a fastener that allows the first element to pivot or hinge with respect to the second element.

16. (Currently Amended) The lacrosse stick of claim 14, wherein the extended portion comprises at least one projection, the projection extending substantially perpendicular from a longitudinal axis of the extended portion, projections and the second element comprises at least two pieces structured and arranged to be fitted together over the at least one projection projections.

17. (Original) The lacrosse stick of claim 14, wherein the second element comprises a resistive material in the interior.

18. (Original) The lacrosse stick of claim 17, wherein the resistive material is a polymeric foam, a polyurethane bushing, a coiled spring, a living hinge or a metal or polymeric composition having at least some elasticity.

19. (Currently Amended) The lacrosse stick of claim 21, wherein the articulation mechanism comprises:

a first element;
style="padding-left: 40px;">a second element; and
style="padding-left: 40px;">a move bar comprising at least one pivotable fastening element connected to the first element and second element.

20. (Currently Amended) The lacrosse stick of claim 21, wherein the articulation mechanism comprises a ball and socket assembly.

21. (Withdrawn) The lacrosse stick of claim 2, wherein the articulation mechanism comprises a living hinge.

22. (Withdrawn) The lacrosse stick of claim 2, wherein the handle portion comprises a Y-shaped area having a yoke, the articulation mechanism comprises at least one first element which pivotally connects the head portion to the Y-shaped area and at least one second element disposed on the handle portion for restricting at least some flexure of the head portion with respect to the handle portion.

23. (Withdrawn) The lacrosse stick of claim 2, wherein the head portion comprises a first head portion and a second head portion, and the articulation mechanism articulates the first head portion with respect to the second head portion.

24. (Currently Amended) The lacrosse stick of claim 2, further comprising a radially-expandable system comprising a plurality of generally triangular offset wedges and a tightenable fastener disposed within the plurality of wedges, wherein the fastener is disposed within at least one wedge at a position that is off-center from at least one other wedge.

25. (Currently Amended) The lacrosse stick of claim 21, further comprising a locking mechanism for restricting the flexure of the lacrosse head portion with respect to the lacrosse stick handle portion.

26. (Currently Amended) An articulated lacrosse stick comprising:
a lacrosse stick handle; and
a lacrosse head; and

means for articulating the lacrosse head with respect to the lacrosse stick handle.

27. (Currently Amended) The lacrosse stick of claim 26, wherein the means for articulating the lacrosse head comprises an articulation mechanism for displacing the lacrosse head portion from a longitudinal axis of the lacrosse stick handle portion by a displacement angle of up to about 60 degrees.

28. (Original) The lacrosse stick of claim 26, wherein the displacement angle is from about 1 degree to about 10 degrees.

29. (Original) The lacrosse stick of claim 26, wherein the displacement angle is from about 2 degrees to about 5 degrees.

30. (Withdrawn) An articulation mechanism for use with a lacrosse stick having a head and a handle, the articulation mechanism comprising:

a first element; and

a second element connected to the first element such that the first element can pivot, hinge or flex with respect to the other element.

31. (Withdrawn) The articulation mechanism of claim 30, wherein the first element is moveable from a longitudinal axis of the second element by a displacement angle of up to about 60 degrees.

32. (Withdrawn) The articulation mechanism of claim 31, wherein the displacement angle is from about 1 degree to about 10 degrees.

33. (Withdrawn) The articulation mechanism of claim 31, wherein the displacement angle is from about 2 degrees to about 5 degrees.

34. (Withdrawn) The articulation mechanism of claim 30, wherein the first element is moveable from a longitudinal axis of the second element to first and second displacement angles of up to about 60 degrees each.

35. (Withdrawn) An articulation mechanism for use with a lacrosse stick having a head and a handle, the articulation mechanism comprising:

means for connecting the head to the handle; and
means for displacing the head from the longitudinal axis of the handle.

36. (Withdrawn) The articulation mechanism of claim 35, wherein the means for displacing displaces the head from the longitudinal axis of the handle by a displacement angle of from about 1 degree to about 60 degrees.

37. (Withdrawn) The articulation mechanism of claim 35, wherein the means for displacing displaces the head from the longitudinal axis of the handle by a displacement angle of from about 2 degrees to about 10 degrees.
